

MARVIN NITSCHKE

Full-Stack Engineer (TypeScript/Python) | AI Applications | Physics B.Sc.

Berlin, Germany | marvin.nitschke@gmail.com | +49 174 167 7320

[linkedin.com/in/marvin-nitschke-775251356](https://www.linkedin.com/in/marvin-nitschke-775251356)

Availability: Working Student (currently enrolled) · Berlin (on-site preferred) · from August 2026

SUMMARY

Full-Stack Engineer (TypeScript, React, Python) with experience building AI applications and web systems that run in production. Co-founder of Kether OS, where I built and shipped LLM-based systems and agent pipelines. Used to owning projects end to end, from requirements through development to release.

EDUCATION

Technical University of Berlin (TU Berlin)

B.Sc. Physics, final grade: **1.4**

Berlin, Germany

Oct 2019 – Jun 2025

- Focus: Computational Physics. Thesis: “Time delay in active colloids with social interactions” (Prof. Holger Stark). Advanced coursework in Machine Learning.

Abitur (university-entrance diploma) 2019, grade 1.7. Advanced courses: Physics, Mathematics.

EXPERIENCE

Full-Stack Engineer & Co-Founder at Kether OS GmbH

AI applications and web systems for DACH B2B clients.

Berlin, Germany

Aug 2025 – Present

- As a full-stack engineer, built frontend and APIs and contributed to the technical infrastructure.
- Owned client contact and project responsibility for several B2B AI projects.

Tutor (Physics) at TU Berlin

60 hours/month over 3+ years.

Berlin, Germany

Apr 2022 – Oct 2025

- Led two weekly tutorial groups; co-developed problem sets and final exams.

SELECTED PROJECTS

Adplorer AI Ad-Generation Module: production project for a DACH ad-tech agency

Kether OS, 2025–2026

- LLM-based ad-generation system for Meta and Google Ads, live in production. As project manager and main client contact, owned it from requirements to delivery.

Kether OS Internal AI Application: internal product

Kether OS, 2025–2026

- Built a sliding-panel UX where the AI acts alongside the user on the page (agents, workflows, tickets); designed the security architecture with identity & access management (Keycloak), an Apache gateway, and OAuth2/JWT for the micro-backends.

AI Agent Pipeline for Lead Generation

Kether OS, 2026

- Turned unstructured web data into structured output: Yellow-Pages scraping, web-search-augmented AI enrichment (context engineering, schema-validated outputs), deduplication, and export to an Excel sheet. Built with the OpenAI Agents SDK.

Rugby Bundesliga: first official league website

Kether OS, 2025

- Built frontend and backend (React, Python) end-to-end in a team of two, incl. third-party integrations, mobile-first design, and stakeholder coordination.

SKILLS

Programming: Python · TypeScript · C (basics) · Bash · LaTeX

Frontend: React (Vite, TanStack) · Next.js · HTML5 · native CSS · Tailwind · Mobile-First Responsive Design

Backend: FastAPI · API design · external API integration · LLM integration (OpenAI)

Infrastructure: Linux/Arch · Docker · Nginx · CI/CD (GitHub Actions, GitLab CI)

Tools: Neovim · VSCode · Git · Claude Code

LANGUAGES

German (native) · English (full professional proficiency)
